Aromar Revi (arevi@iihs.co.in) IIHS Twenty Priorities to consider during a Lockdown and Health Emergency

1. The list above consists of four main sub-divisions: Research, Observational, and Practical/Commercial. The first division includes research conducted in laboratories, observational studies, and practical/commercial studies. The second division comprises research conducted in the field, observational studies, and practical/commercial studies. The third division includes research conducted in the laboratory, observational studies, and practical/commercial studies. The fourth division includes research conducted in the field, observational studies, and practical/commercial studies. The fifth division includes research conducted in the laboratory, observational studies, and practical/commercial studies. The sixth division includes research conducted in the field, observational studies, and practical/commercial studies. The seventh division includes research conducted in the laboratory, observational studies, and practical/commercial studies. The eighth division includes research conducted in the field, observational studies, and practical/commercial studies. The ninth division includes research conducted in the laboratory, observational studies, and practical/commercial studies.
Aromar Revi (arevi@iihs.co.in) IIHS Twenty Priorities to consider during a Lockdown and Health Emergency
Twenty Priorities to consider during a Lockdown and Health Emergency

4. Lifeline services (lifeline) must be accessible and immediately available during a lockdown. How can residents be assured of their access to these services? How can these services be sustained?

5. Volunteers, teachers, and staff are crucial during a lockdown. How can their role be effectively utilized to support residents? How can they be motivated and supervised effectively?

6. Personal care and hygiene must be prioritized. How can residents be assured of their access to essential items like soap, masks, and hand sanitizers?

7. Sanitation and waste management are critical. How can residents be assured of their safety and health during a lockdown? How can these services be sustained?

8. Essential services like electricity, water, and gas must be prioritized. How can residents be assured of their access to these services during a lockdown? How can these services be sustained?

9. Emergency operations must be prioritized. How can residents be assured of their safety and health during a lockdown? How can these services be sustained?

10. Essential services like electricity, water, and gas must be prioritized. How can residents be assured of their access to these services during a lockdown? How can these services be sustained?

11. Essential services like electricity, water, and gas must be prioritized. How can residents be assured of their access to these services during a lockdown? How can these services be sustained?

12. Essential services like electricity, water, and gas must be prioritized. How can residents be assured of their access to these services during a lockdown? How can these services be sustained?
